# 1 Problem statement

Implement the algorithm for solving systems of congruences.

# 2 Algorithms

#### 2.1 Euclid's extended algorithm

```
Ensure: c = gcd(a, b) and u, v \in \mathbb{Z}, au + bv = c
    procedure EUCLID(a,b)
          u_2 \leftarrow 1
          u_1 \leftarrow 0
          v_2 \leftarrow 0
          v_1 \leftarrow 1
          while b > 0 do
                 q \leftarrow |a/b|
                \mathbf{r} \leftarrow a - qb
                 \mathbf{u} \leftarrow u_2 - qu_1
                 \mathbf{v} \leftarrow v_2 - qv_1
                 a \leftarrow b
                 \mathbf{b} \leftarrow \mathbf{r}
                 u_2 \leftarrow u_1
                 u_1 \leftarrow u
                 v_2 \leftarrow v_1
                 v_1 \leftarrow v
                 \mathbf{d} \leftarrow \mathbf{a}
                 \mathbf{u} \leftarrow u_2
                 v \leftarrow v_2
          end while
          euclid \leftarrow a
    end procedure
```

# 2.2 Key generation

```
procedure GENERATE_KEY
p \leftarrow random\_prime\_number
g \leftarrow generator\_of\_\mathbb{Z}_p
a \leftarrow random\_integer \in 1, p-2
```

$$\begin{aligned} \text{public\_key} \leftarrow \text{p,g,} g^a \\ \text{private\_key} \leftarrow \text{a} \\ \textbf{end procedure} \end{aligned}$$

# 2.3 Encryption

$$\begin{aligned} & \mathbf{procedure} \ \mathbf{GENERATE\_KEY}(\mathbf{p}, \ \mathbf{g}, \ g^a, \mathbf{m}) \\ & \mathbf{k} \leftarrow \mathbf{random\_integer} \in 1, p-2 \\ & \alpha \leftarrow g^k \mod p \\ & \beta \leftarrow , \cdot (g^a)^k \mod p \\ & \mathbf{c} \leftarrow (\alpha, \beta) \\ & \mathbf{end} \ \mathbf{procedure} \end{aligned}$$

# 2.4 Decryption

```
 \begin{aligned} &\textbf{procedure} \ \ \text{DECRYPTION}(\mathbf{p}, \ \mathbf{g}, \ g^a, \mathbf{a}, \ \alpha, \ \beta) \\ & \quad \mathbf{m} \leftarrow \alpha^{-a} \cdot \beta \mod p \\ & \quad \textbf{end procedure} \end{aligned}
```
